

Making PVA Solution

- Add 30 g or 1 ounce of PVA powder to 500 ml or 16 fluid ounces of cold water in a bowl or double-boiler. Leave it for 1 hour to PVA absorb the water.
- Put the bowl with this mixture into a saucepan with water or used the double-boiler. Put it on a low heat hot plate and stir until the PVA is completely dissolved and the solution is consistent.
- Strain the PVA Solution through material get rid of small lumps.
- Put the PVA Solution into the jar with a lid
- The PVA Solution will last for many months and be ready to make slime!
